PROFESSIONAL WEB EXPERIENCE AND PROJECTS

SharkNo role: front-end (JavaScript, HTML, CSS) <https://sharkno.herokuapp.com/>

Using this app you can find information about shark attacks all over the globe. Also you can create a report about attack if you became a witness. Technologies used: **mySQL** (for data and session storage), **Node.js**, **Express** – backend; **Bootstrap**, **JavaScript**, **HTML**, **CSS** – frontend.

Scraper app role: back-end(mongoDB) <https://stormy-caverns-66841.herokuapp.com>

This application was designed with **MongoDB** and data scraping with **Axios** and **Cheerio**. It allows users to view current news stories, save/delete stories of interest, and add/delete comments about the stories. All articles were rendered by **handlebars**.

Clicky-Game role: front-end (React.js) <https://afternoon-savannah-86141.herokuapp.com>

This is memory game created on **React.js** with js logic inside.

Work history
